

Do it right. Do it once.

Flexible visco-elastic coating and sealant solution

MMT GROUP A/S

WHY CHOOSE STOPAQ®?

STOPAQ® is a patented sealant solution of steel pipelines for, among others, the oil, gas and production industries.

The immediate and permanent adhesion to virtually all types of steel pipelines in both cold and hot temperatures without special pre-cleaning eliminates both risky grinding and messy sandblasting.

STOPAQ® can even be applied outside the existing seal, and the flexibility also extends to any repair work, for instance, collision damage and/or re-routing pipes. It's easy and straightforward.

A STOPAQ® sealant solution avoids downtime, as the seal can be made while the system is running - regardless of the temperature of the pipeline. STOPAQ® has been tested and proven on items with operating temperatures from -45 degrees to +120 degrees C.

The advantages of STOPAQ® rather than traditional corrosion protection

No production interruption

STOPAQ® eliminates sandblasting and grinding of existing pipes so that production can continue unhindered.

Eliminates sandblasting

STOPAQ® can be applied directly on surfaces with and without an existing coating.

Useable under all conditions

STOPAQ® can be used both outdoors and inside, as well as over/under water. Can be used from -45 to +120 degrees C.

30-year warranty

STOPAQ®'s expected operational life is over 60 years. MMT Group A/S is a certified fitter and offers a 30-year warranty.

Easy to repair if damaged

STOPAQ® can easily be repaired in case of any damage. Again without production downtime and time-consuming sandblasting.

Do it right. Do it once.

30-YEAR WARRANTY

We think in terms of sustainable and cost-effective solutions.

With STOPAQ®, we demonstrate our thinking through the concept of “people, planet, profit” with a focus on long-lasting, environmentally friendly solutions, where common sense is also reflected on the bottom line. We seal for life - and we guarantee it. Therefore, our products are always delivered with a 30-year warranty certificate.

MMT Group A/S is a certified STOPAQ® fitter and has performed surface treatment solutions on land, at sea and in the air since 2005.

HOW DO YOU USE STOPAQ®?

STOPAQ® is an elastic and flexible sealant solution that rolls over the largely untreated item. STOPAQ®'s fluid-like character and elastic properties prevent corrosion and frictional stress during the operational life of the pipes. The warranty period is 30 years, while STOPAQ®'s expected operational life is estimated to be over 60 years.

STOPAQ® can be used on both cold and hot items, from -45 to +120 degrees C and is among the only solutions for applying directly onto condensing pipelines.

Since both prior grinding and sandblasting are eliminated when using STOPAQ®, the great advantage is that the production apparatus does not have to be shut down while the sealant is being applied. Pre-treatment for ST2/3 and degreasing is sufficient. Risks of fire/explosion in connection with grinding, for example, oil and gas pipes and/or annoying temperature rises of cooled pipes regarding production downtime at, for instance, breweries is therefore non-existent.

With STOPAQ® as a sealant solution, you are guaranteed an uninterrupted production flow and durability that goes far beyond reasonable limits.

Feel the strength and flexibility for yourself

WHAT IS STOPAQ®?

STOPAQ® produces and supplies a wide range of innovative, self-healing anti-corrosion coating solutions. The products are patented, and distribution is worldwide.

The STOPAQ® systems are maintenance-free and permanently seal the items against the ingress of water, oxygen, bacteria and/or AC/DC power.

STOPAQ® with 0% VOC is the most environmentally friendly protection system in the coating world and is 100% stable, 100% self-healing and with 100% guaranteed adhesion.

STOPAQ® is part of Seal For Life Industries, which includes a group of closely associated companies, all hugely committed to the prevention and control of corrosion.

Seal For Life is our contribution to a sustainable and corrosion-free world through sealants that only require a minimal surface.

You can advantageously use STOPAQ® here

STOPAQ® can be used on pipes, tanks and constructions within, for example, the offshore, wind, oil & gas and pharmaceutical industries, as well as excelling in breweries and food production.

Do you want to know more about STOPAQ®?

MMT Group A/S is certified and you are always welcome to contact Ronni Madsen by phone on +45 25 75 85 02 or by e-mail at rm@mmt-group.dk

The safe choice

MMT Group A/S is a certified provider of STOPAQ® visco-elastic coating and sealant solutions.

As a professional partner of STOPAQ®, we have documentable know-how in the field, and therefore, we comply with all the requirements necessary to offer a 30-year warranty on the products.

This is what makes MMT Group A/S the SAFE choice in any situation.

Expertise in overall solutions within surface treatment ...

MMT Group supplies overall solutions and personnel within corrosion protection and surface treatment.

- Inspection
- Settlement of claims - expert opinion.
- Rope Access (commercial climbing)
- Material advice
- Corrosion protection
- Surface treatment reports
- Training courses
